To Whom It May Concern
c/o Ms Megan Hollway
16 Roslyn Street
LIVERPOOL NSW 2170

Sir/Madam

RE: Megan HOLLWAY DOB: 19/1/1990 MRN: 1283329

I am writing in support of Megan Hollway's application for NDIS funding for a functional electrical stimulation (FES) device. Ms Hollway is under my care for Multiple Sclerosis (MS).

Ms Hollway has significant mobility impairment due to weakness in her right leg as a result of her MS. She has recently been trialling a Bioness L300 Go FES system. This device has provided a substantial and measurable improvement in her mobility and quality of life.

Since commencing the trial, Ms Hollway's walking speed and endurance have demonstrably increased. Objectively, the strength in her right ankle dorsiflexion has improved from a grade 3/5 to a grade 4-/5 on the MRC scale. This allows her to lift her foot more effectively, reducing the risk of trips and falls and enabling a more stable gait. Subjectively, she reports feeling significantly more confident and being able to walk for longer distances.

Ms Hollway has completed multiple courses of high-efficacy medical therapies for her MS, including two courses of Mavenclad. Despite these treatments, she continues to experience significant and functionally limiting symptoms. The FES device represents a safe and effective non-pharmacological intervention that has provided a benefit beyond what has been achieved with medical therapy alone. Continued access to this device is crucial for maintaining her current level of function, promoting independence, and maximising her participation in the community.

Given the clear subjective and objective benefits observed during the trial period, I strongly support her application for funding to obtain this device on a permanent basis.

Kind regards

Electronically Approved by:

Dr Colin Mahoney
Consultant Neurologist

Liverpool Hospital Department of Neurology is pleased to offer a new comprehensive Memory and Cognition Clinic. Our service is free for those with Medicare and available to patients of all ages living in South West Sydney and aims to provide prompt diagnosis and treatment. If your patients are worried about their memory and thinking please direct a referral to our department where it will be rapidly assessed.
