

Based on the final submission strategy and materials we have compiled so far, the best approach is to attach only the original supporting documents that the NDIS examiner actually needs to verify.

The following details are already included in the text.

MS diagnosis and medical history,

gait analysis,

muscle strength

assessment, fatigue

Bioness trial rationale

Interpretation of Outcome Measure Results

Community trial results

Washout results

NDIS goal connection

Reasonable & Necessary yy

Therefore, there is no need to repeat this in an Assessment Summary or a separate Clinical Summary.

Final Appendix Structure (Recommended)

Appendix A – Medical Support Evidence A1. Neurologist Support

Letter

Attached materials

Original Neurologist Support Letter

purpose

Medical

Rationale for the Necessity of Using Bioness for Diagnostic

Confirmation Appendix B – Outcome Measure Results B1.

Fatigue Severity Scale (FSS)

Attached materials

Original result sheet

B2. Patient Specific Functional Scale (PSFS)

Attached materials

Original result sheet

B3. Other Outcome Measures

Attached materials

Measurement data performed by Physio

(Only if present)

Appendix C – Community Trial Evidence C1. 8-Week Community

Trial Logbook

Attached materials

Patient-written original logbook

purpose

Proof of actual usage verification
function change verification
increased participation verification

Appendix D – Washout Evidence D1. 3-Week

Washout Logbook

Attached materials

Original logbook

purpose

Functional degradation proven after equipment removal

Verification of Bioness Effect Duration

Appendix E – Funding Evidence E1. Supplier

Quote

Attached materials

Bioness L300 Go Lower Leg + Thigh yyy

purpose

High Cost AT Cost Basis

Appendix F – Participant Goal Evidence

F1. NDIS Goals

Attached materials

NDIS Goal Statement

purpose

Appendix page to include in the report

verifying equipment and NDIS Goal alignment

You only need to insert the following at the end of the main text.

APPENDICES

The following supporting documents are attached and should be read in conjunction with this report.

Appendix A – Medical Support Evidence

A1. Neurologist Support Letter

Appendix B – Outcome Measure Results

B1. Fatigue Severity Scale (FSS)

B2. Patient Specific Functional Scale (PSFS)

B3. Additional Physiotherapy Outcome Measures (where applicable)

Appendix C – Community Trial Evidence

C1. 8-Week Community Trial Logbook

Appendix D – Washout Evidence

D1. 3-Week Washout Logbook

Appendix E – Funding Evidence

Appendix F – Participant Goal Evidence

F1. NDIS Goal Statement

This structure is the cleanest final form, utilizing only currently available data with minimal duplication, and allowing NDIS examiners to quickly locate the necessary evidence. In particular, since the previously discussed Assessment Summary, Physio Referral Letter, and separate Clinical Summary significantly overlap with the main body of the document, excluding them from this case appears more professional.

Feedback from the mother and the patient is missing.

you're right.

The composition of the Appendix organized so far lacks the most important qualitative evidence, which is feedback from patients and mothers.

This case is not simply a case of improved walking speed,

Reduced fatigue,
increased activity
participation,
resumption of baking, ability to
stand for long periods, reduced
knee hyperextension, changes in mother's observations

The key is to demonstrate the same functional change.

In particular, NDIS examiners place importance not only on numbers (FSS, PSFS) but also on Participant Voice and Carer Observation.

ÿÿ ÿÿ Appendix ÿÿ Appendix A –

Medical Support Evidence A1. Neurologist Support Letter

Appendix B – Outcome Measure Results

B1. Fatigue Severity Scale (FSS)

B2. Patient Specific Functional Scale (PSFS)

B3. Additional Physiotherapy Outcome Measures Appendix C –

Participant and Carer Feedback C1. Participant Feedback

Statement

Feedback provided by the patient during the 8-week trial and washout period

yes:

Improved standing tolerance,
ability to bake,
changes in
fatigue, and improved knee control
device satisfaction

C2. Carer Feedback Statement

Changes observed by mother

yes:

Changes in
mobility, changes in
confidence, increase in standing activity

D – Community Trial Evidence D1. 8-Week

Community Trial Logbook Appendix E – Washout

Evidence E1. 3-Week Washout Logbook

Appendix F – Funding Evidence F1.

Supplier Quote Appendix G – Participant

Goal Evidence G1.

NDIS Goals 77 77 7 77

Instead of re-attaching the entire logbook, the patient and mother's feedback is provided as follows:

It is best to organize it into a one-page Participant & Carer Feedback Summary.

The reason is:

The entire logbook is already attached in Appendix D/E,
allowing examiners to quickly verify only the key
contents and link the main text to objective evidence.

For example, Appendix C is about 1 to 2 pages:

Participant Feedback

"Prior to the trial I was unable to stand long enough to complete baking activities. Following adjustment of the Bioness L300 Go system, I was able to spend longer periods standing and completed baking activities that I had previously avoided."

"After several weeks of use, I noticed that I required less daytime rest and felt more confident when walking."

Carer Feedback

"I observed improved knee control and standing tolerance during the trial period."

"Following removal of the device, I noticed a return of some of the mobility difficulties that had improved during the trial."

Organizing it in this format makes it very easy to read and highly persuasive from the perspective of an NDIS examiner.

Therefore, based on the current Bioness final submission standards, it is recommended to include Appendix C (Participant & Carer Feedback Summary). In practice, this is the next most valuable supporting document after FSS and PSFS.

I want to send the AT report via email, but there are many attachments in addition to the AT report. How should I send them?

For NDIS High Cost AT submissions, it is common to send one AT Report + Supporting Evidence package.

From the examiner's perspective, the best approach is to organize files by clearly numbering them, rather than sending them scattered across multiple files.

Recommended Method 1 (Most Recommended)

Attach multiple PDF files to an email

01_AT_Report_Bioness_L300Go.pdf

(Main Report)

Machine Translated by Google

02_Appendix_A_Neurologist_Letter.pdf

03_Appendix_B_Outcome_Measures.pdf

(FSS + PSFS ýý)

04_Appendix_C_Participant_Carer_Feedback.pdf

05_Appendix_D_Community_Trial_Logbook.pdf

06_Appendix_E_Washout_Logbook.pdf

07_Appendix_F_Bioness_Quote.pdf

08_Appendix_G_NDIS_Goals.pdf

The examiner can find it immediately just by looking at the file name.

Recommended Method 2 (My Preferred)

Submit only 2 PDFs

File 1

AT_Report_Bioness_L300Go.pdf

(Report body only)

File 2

Supporting_Evidence_Bioness_L300Go.pdf

in

Appendix A

Appendix B

Appendix C

Appendix D

Appendix E

Appendix F

Appendix G

Combine all

This method is the cleanest.

The examiner also

If this is your current Bioness case, submitting a total of two files—one AT Report and one Supporting Evidence PDF—is the most professional and convenient method for the examiner to review.
